LOURDES MATHA

COLLEGE OF SCIENCE AND TECHNOLOGY

Approved by AICTE & Affiliated to APJ Abdul Kalam Technological University (KTU)

Under the Archdiocese of Changanacherry,

Patron: His Grace Mar Joseph Perumthottam,

Archbishop of Changanacherry

ABOUT OUR COLLEGE

Lourdes Matha College of Science and Technology established by the "Under the Archdiocese of Changanacherry, Patron: His Grace Mar Joseph Perumthottam, Archbishop of Changanacherry", has been approved by the Govt of Kerala and the All India Council for Technical Education (AICTE) vide order No: 06/06/KER/ENGG 2002-03 dated 27-05-2002 and is affiliated to the APJ Abdul Kalam Technological University. The college has spacious campus of 25 acres at rustic village in the outskirts of Thiruvananthapuram city, hardly 24 km away from it. The scenic beauty and virgin surroundings of the picturesque lush green rubber plantations, the back drop of misty Western Ghats and the serene, tranquil hillock provide perfect environment for harmonious study. The vision of the Lourdes Matha Catholic Educational Society is to establish a "Centre of Excellence" in the field of Engineering and Technology to mould world class professionals.

Embedded Systems Development Process & IoT

Embedded systems are part and parcel of every modern electronic component. These are low power consumption units that are used to run specific tasks for example remote controls, washing machines, microwave ovens, RFID tags, sensors, actuators and thermostats used in various applications, networking hardware such as switches, routers, modems, mobile phones, PDAs, etc.

Embedded systems will also be at the cornerstone for the deployment of many Internet of Things (IoT) solutions, especially within certain industry verticals and Industrial Internet of Things (IIoT) applications.

Process & IoT

Many of us have dreamed of smart homes where our appliances do our bidding automatically. The alarm sounds and the coffee pot starts brewing the moment you want to start your day. Lights come on as you walk through the house. Some unseen computing device responds to your voice commands to read your schedule and messages to you while you get ready, then turns on the TV news. Your car drives you to work via the least congested route, freeing you up to get caught up on your reading or morning meeting while in transit.

Arduino IoT Programming

Nowadays a new emerging technology is Internet of Things (IoT): this post describes how to create Internet of things with Android and Arduino. In IoT project, all the physical objects (things) are connected together using internet infrastructure. Arduino board is one of the most important object in this ecosystem.

Raspberry Pi

The Raspberry Pi is a low cost, credit-card sized computer that plugs into a computer monitor or TV, and uses a standard keyboard and mouse. It is a capable little device that enables people of all ages to explore computing, and to learn how to program in languages like Scratch and Python. It's capable of doing everything you'd expect a desktop computer to do, from browsing the Internet and playing high-definition video, to making spreadsheets, word-processing, and playing games.

SDP Objective : To give the participants an awareness about the current scenarios in cyber world.

► Cyberspace Security

Increased Internet penetration has given exponential rise in sophisticated attacks on Information Technology (IT) infrastructure. Attackers are gaining access to sensitive information like credit card details and other financial information. Smartphone attacks are growing in multiple folds. Also with the growth of 3G services and business transactions using mobile phones, there is a substantial increase in mobile malware. In order to make our IT infrastructure resilient against these threats, there is a need for cutting-edge Research and Development efforts in Cyber Security. C-DAC has been actively pursuing R & D in a number of sub-areas in Cyber Security domain.

► Cryptography and Digital Signature

Currently, many applications or forms submitted by a citizen require physical signature of the citizen. A digital signature takes the concept of traditional paper-based signing and turns it into an electronic "fingerprint." This "fingerprint," or coded message, is unique to both the document and the signer and binds them together. In short, a digital signature has the same function as that of a handwritten signature. Some of the salient features of digital signature are non-repudiation, integrity and authenticity. The Information Technology Act 2000 provides the required legal sanctity to digital signatures based on asymmetric crypto systems.

► Cyber Forensics and Cyber Law

The number of people who fall prey to the vicious web of Cyber Crimes is also on the rise. Most of us are 'caught in the web' owing to over sight or sheer ignorance of the law. This could not only result in the conviction of individuals but also result in major setback for organizations.

Computer forensics is the application of investigation and analysis techniques to
